Back PLOW

FOR PICK-UP TRUCK

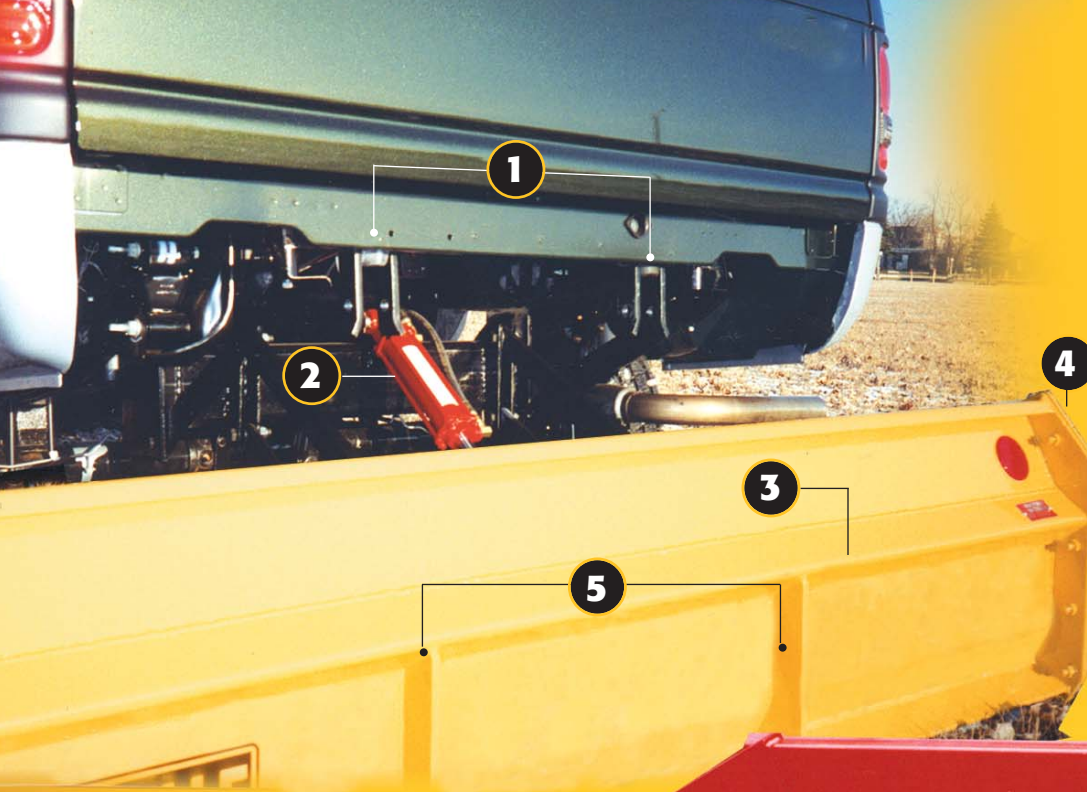

The best partner for your front plow system

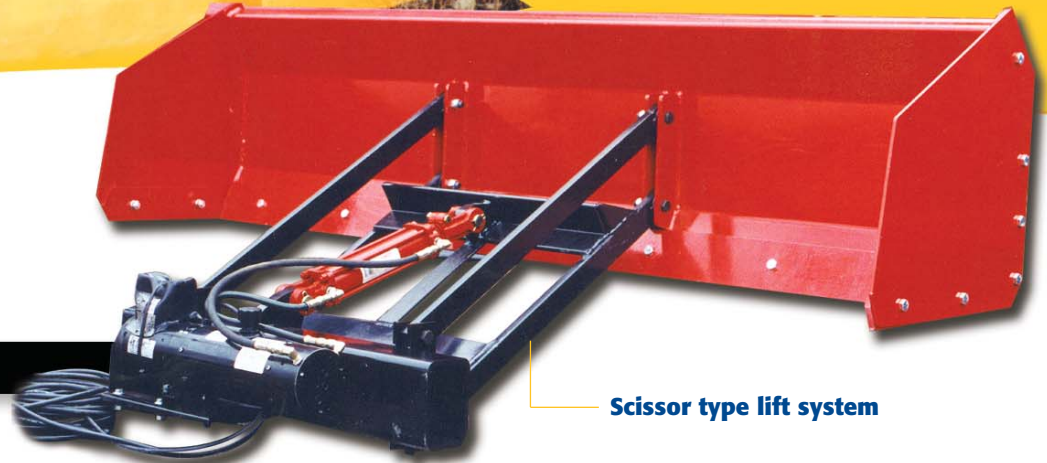

- Increases your plowing productivity by up to **50%**. The back plow pulls snow while the front plow pushes it so you can carry a second load each trip across parking lots.
- Eliminates inefficient back dragging and turnaround time required with all front mount plows
- Performs work that a front plow cannot do, such as:
 - scraping snow and ice off the surface with its 2,000 lbs down pressure cylinder
 - getting closer to garage doors for more plowing and less shovelling
- Works as a productive ballast to relieve front axle stress on pick-up truck
- Exclusive frame mount installation:
 - provides a rugged back plow assembly
 - exclusive scissor type lift system that provides higher lift compare to all hitch mount system
 - minimal protusion at the back of pick-up so you don't need to worry when you back up or go around cars in a parking lot

EXCLUSIVES FEATURES

- 1** A **support system** is provided to lock the plow in the carry position when travelling on the road or during a long period without plowing
- 2** The **double acting cylinder** allows the lift of the truck rear suspension for improved scraping capacity
- 3** **Horizontal reinforcement**
- 4** Bolted **end plates** with replaceable wear blades
- 5** **Vertical reinforcements**

SPECIFICATIONS

- Approx. weight: 500 lbs
- Height of moldboard: 20"
- 10 ga moldboard construction
High strength steel end plates
- Electro-hydraulic pump (cycle time: 2.5 seconds, 2qts, 2000 lbs down pressure)
- Length of moldboard: 84"

OPTIONS

- Polymer blade
- Reflective safety tape
- 24" plow guides
